

Price

Namespace Siso\Bundle\PriceBundle\Model

The **Price** class defines a generic price object. When attached to a **ProductNode** object, the Field **PriceField** is used.

As this class is extending **ValueObject**, you can set the necessary properties a new **Price** object easily using an array in the constructor.

Properties

Name	Type	Mandatory	Description
price	float	yes	The main price value
priceInclVat	float	no	The price value definitive including VAT
